

CPSC321 Final Project

By Lauren Nguyen

What is my project about?

- My project is a database that stores a students activities, courses, and extracurriculars. The intent of this website is to relieve stress on students, especially upper classmen looking for internships and job opportunities. By keeping the important things such as what you have accomplished in college, you are able to reference the database and focus on everything else in life.

Populating Data

- Via friends and zagweb

Testing and Troubles

- I tested my project by giving my friends access to it to ensure it was not buggy and up to their standards and my own
- The hardest trouble was the learning curve of php and html. Getting the two to work intertwined with SQL was a bit difficult.

Next steps...

- Adding in more data for users.
- Making more statistical queries for users.
